MONTHLY WEATHER MAP

March 1960

March 1960 was a cold month in most of Canada. Warm weather late in the month brought mean temperatures up to normal values in southern British Columbia, and the generally stormy conditions prevailing in the Atlantic Provinces gave mean temperatures two or three degrees above the seasonal values to places on the shores of Gulf of St. Lawrence. Throughout the remainder of the country, temperatures were low. In northern British Columbia, southern Ontario, and northeastern Quebec, mean temperatures were ten to twelve degrees below the seasonal values.

The weather through most of the month was determined by a ridge of cold Arctic air extending from the Mackenzie Valley southeastward, occasionally almost to Florida, with outbreaks of cold air migrating southward through the Great Lakes. In the latter part of the month, a few small lows moved eastward through the Great Lakes into Quebec. Through the month, warm air gradually moved eastward from the Pacific Coast. The main storm tracks lay, therefore, to the west and south of the ridge. After crossing the Atlantic Coast of the United States a number of storms turned northward along the coast, and into the area of the Atlantic Provinces.

The precipitation pattern in Canada shows, therefore, excesses along the Pacific Coast, in the northern parts of the Prairie Provinces, in the Yukon, and in the upper Mackenzie Valley. Coastal storms brought heavy snowfalls to most areas of the Atlantic Provinces. On the other hand, precipitation was deficient in most of Quebec, Ontario, the southern Prairies, and eastern areas of the Northwest Territories.

The early part of March was cold in British Columbia. Temperatures were particularly low for the first five days. On the 5th a depression off the coast brought milder weather to Vancouver and Victoria. The weather remained cloudy and cool until mid month, when the combined effects of a high pressure centre moving eastward from the Pacific and a low moving southeastward through Juneau brought higher temperatures to the area. In the south, the warmer temperatures lasted for the remainder of the month. On the 25th, Vancouver Airport reported 67 degrees, the warmest March day there in twenty-four years of records, and on the 21st, Lytton reported 75 degrees - the highest temperature recorded in Canada during the month. As a result, mean temperatures throughout southern British Columbia reached within two degrees of the long-term averages, and there were a few small excesses along the coast and in the Upper Fraser and Okanagan Valleys. In the northeastern part of the Province, however, mean temperatures for the month were eight to ten degrees below the normal March values.

Precipitation was generally above the March normal along the Pacific Coast. Snowfalls were heavier than usual in the north, mainly as a result of waves moving from northwest to southeast along the border of the warm and cold air masses. The region of the Kootenay and Arrow Lakes had heavy snows early in the month and rain in the last few days, to bring precipitation totals above the March normals. On the other hand, the Okanagan and Upper Fraser Valleys had only about half the normal falls. On the 3rd, a depression off the coast gave about five inches of snow to Vancouver and Victoria - about ten times the normal March snowfall in that area.

In the Yukon and in the Upper Mackenzie Valley, March was a cold month, with mean temperatures six or seven degrees below normal. There were occasional surges of warm Pacific air, and the period from the 16th to the 26th was generally milder. The warm air that entered British Columbia on the 15th pushed northward to the Pelly River and eastward as far as Great Slave Lake, bringing temperatures into the low forties on the 18th. Again on the 24th milder air moved into the Yukon, and Dawson reached 38 degrees on the 24th and 25th.

Snowfalls in this area generally totalled about six to ten inches. These represent above-normal snowfall; the ten-inch fall at Norman Wells was about two and a half times normal for March. Much of this snow fell during the period from the 20th to the 26th, as a depression moved toward the southeast through the area. In the extreme south of the Yukon, falls were greater; Watson Lake reported a total snowfall of twenty-three inches, more than three times the usual March fall. In northern and eastern parts of the District of Mackenzie, falls were light, with only one to four inches at most stations.

March 1960 was a cold month across the Prairie Provinces. Temperatures were notably low during the first week. Minimum readings of - 30°F. occurred through the area, and at Regina temperatures failed to reach the zero mark for the first four days of the month. After mid-month, temperatures moderated considerably as the Arctic front worked its way eastward. The moderating effect was most noticeable in Alberta, particularly during the period from the 16th to the 26th. Medicine Hat reported 69 degrees on the 25th. Mean temperatures, nevertheless, were low, with deficiencies ranging from three or four degrees in southern Alberta to eight or nine degrees in southwestern Manitoba.

The pattern of precipitation across the Prairies was indicative of the position of the Arctic front, with the greatest falls to the north of the front. Southern Alberta, south of the Athabasca River, was definitely dry, with the greatest deficiencies to the south; Edmonton had about half the normal fall, but Calgary, with only two inches of snow, and Medicine Hat with only one inch, had less than a fifth of their usual March amounts. In Saskatchewan, the dry area was confined to regions south of the South Saskatchewan and Qu'Appelle Valleys, where a few stations reported no precipitation at all. In Manitoba, only the regions south of the Assiniboine River and east of the Red River had below normal precipitation.

North of the Athabasca River in Alberta, the Saskatchewan River in Saskatchewan, and the Assiniboine River in Manitoba, falls were above the March normal, with much of the precipitation falling in the last week of the month. There were notable excesses near the Saskatchewan Forks and near The Pas, with total falls about twice those usual in March. The greatest snowfall in the Prairie Provinces was at Cranberry Portage, north of The Pas, where 29.4 inches of snow fell, about half of it in the last week.

On the 28th, a low south of the International Boundary, moving toward the east, brought thunderstorms to southern Manitoba. This is only the fifth time since records began in 1895 that thunderstorms have been reported at Winnipeg in March.

In Ontario, too, March was quite uncommonly cold. In northwestern Ontario, mean temperatures were about four or five degrees below normal, but eastward anomalies were greater, and in southern Ontario March 1960 was one of the coldest on record. At Toronto, it was the coldest March since 1912, and at Hamilton, the coldest since 1898. It was also the coldest month of the 1959-1960 Winter. For the first twelve days, temperatures failed to rise above freezing anywhere in the Province, and on the morning of the 9th, Hamilton reported its only sub-zero temperature of the winter. Temperatures did not rise appreciably until the 27th, when an easterly rather than southeasterly movement of the Arctic air permitted a storm to move into the Great Lakes area from the west, bringing much warmer air over the region. The last few days were much milder, and Windsor reached 69°F. on the 30th.

Rainfall was almost entirely lacking in Ontario in March. Even southerly areas had only about a fifth of an inch, roughly a tenth of the normal rainfall, almost all of which fell in the milder weather of the last few days. Snowfall was heavier than usual in southern Ontario, with falls of about twenty inches - three or four times the usual March amount. There were several storms with amounts of about five inches - on the 2nd-3rd, the 16th-17th, and the 21st-22nd. In northern Ontario, however, snowfall too was below normal. Most of the snowfall throughout Ontario was confined to the latter half of the month, the first half being in all regions notably clear and sunny. Precipitation totals in Ontario ranged, therefore, about half the normal, the only exceptions being along the south-east shore of Lake Huron.

The cold regime ruled throughout Quebec also in March, with cool dry weather prevailing early in the month, and only a slight amelioration in the second half. The marked warming trend that showed in Ontario in the last few days of the month was less noticeable in Quebec, however. The variation from normal mean temperatures was much greater in the western part of the Province than in the east, and stations along the north shore of the Gulf of St. Lawrence reported small surpluses. Northward, differences from normal were greater, and the largest temperature deficiency in the country was at Fort Chimo, which reported a mean of nine degrees below zero - twelve degrees below normal.

Precipitation also was much below normal at almost all stations in Quebec in March. Snowfall was about normal, or a little above, along the St. Lawrence Valley, but rain was completely absent until the last few days. As a result precipitation totals in the south ranged from half to two-thirds the March normal. Totals were rather higher in the Eastern Townships, and Megantic reported small excesses both of rain and snow. Much of the snowfall at Montreal fell in a ten-inch snowfall on the 17th, as the joint result of the low passing northeastward from the Great Lakes and a coastal low moving northward into New Brunswick. On the last day of the month, as temperatures rose slowly above freezing from the southwest and rain moved across southern Quebec from Ontario, Quebec City experienced one of the most serious freezing-rain storms of recent years, with extensive damage to power lines. In the northern part of the Province, snowfalls were scanty; most stations reported only one to four inches of snow - about a third of normal.

The weather regime in the Atlantic Provinces in March was markedly different from that prevailing in the remainder of Canada. In the Maritimes, the weather was stormy, windy, and dull, marked in most areas by excessive, and even record, snowfalls.

The prevailing weather situation in the Maritimes was a continuation of that prevailing through much of the winter. A succession of Atlantic storms moved into the area along the coast of the United States and along the coast of Nova Scotia. Storms of this type affected the area on the 4th, on the 8th-9th, on the 12th-14th, and again on the 23rd.

Mean temperatures were on the whole rather close to normal, except for stations in southwestern New Brunswick and southwestern Nova Scotia, which reported mean temperatures about two degrees below normal. Temperatures were on the whole quite equable, with no violent swings from warm to cold. Afternoon temperatures were for the most part a degree or two lower, and night-time temperatures a degree or two higher, than normal. Warmer weather moved into the area only on the last day of the month.

Rainfall amounts were only a fraction of those usual for March throughout the Maritimes - indeed, rain was almost unknown until the last few days of the month, when a storm moving across the area from the St. Lawrence Valley brought rain and warmer temperatures. The frequent storms, however, brought excessive snowfall amounts. The storm of the 8th-9th, among the worst snowstorms in Nova Scotia history, gave 23.6 inches of snow to Halifax in twenty-four hours, a new record for March. The storm was accompanied by a 49 miles per hour wind - also a March record. The total March snowfall, 53.0 inches, was nearly five times the normal Halifax March snowfall; it too was a record - the greatest March snowfall since records began eighty-seven years ago. In the storm of March 8th-9th, several fishermen lost their lives in gales off the Nova Scotia coast.

Total precipitation amounts were, therefore, above normal in most of the Maritimes. Exceptions, however, were northern and western New Brunswick, where both rain and snow were below normal.

Similar conditions to these in the Maritimes prevailed on the Island of Newfoundland. Storms travelled through the area from the southwest, giving about half normal rainfall and far more than normal snow. St. John's had more than twice its normal snowfall, and Gander, which normally receives about eighteen inches of snow in March, had 65 inches - a new record, not only for March, but for any month since records began twenty-four years ago. The storm of the 12th-14th was particularly severe at St. John's, as high winds piled the twenty inches of heavy snow into great drifts, blocking railroads and highways for several days. At the end of the month, several Newfoundland stations reported over five feet of snow on the ground.

In the eastern Northwest Territories, temperatures were low and precipitation scanty. Frobisher Bay reported a mean temperature of 15.7°F. - about ten degrees below normal for March - and only 1.6 inches of snow, one-fifth of its usual March fall of eight inches. The coldest place in the country was Eureka, in northwestern Ellesmere Island, with a mean temperature of - 39°, and a minimum of 60 below. Eureka was also one of the driest places in the country, with only a trace of snow.

March 1960
TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
